HEALTH * SAFETY * RESILIENCE

Community Resilience is the ability of a community to use knowledge, expertise, relationships and the resources in the community to recover from an adverse event.

Ammonoosuc Community Health Services (ACHS) is partnering with Resilient American Communities (RAC) and public libraries on an effort to increase health, safety and well being for individuals and for the community as a whole.

COMMUNITY FORUMS SURVEYS A SIMULATED SOLUTIONS TABLETOP EXERCISE

To connect people with shared interests and concerns. To comunicate with funders and others with resources to address our needs.

Community Forums: Map community assets, services and liabilities. Identify solutions.

Survey: What do you think is needed?

rban Farming Relieves Food Shortages: Sustainable Agriculture on the Rise

Technology used by NASA scier in space since the 1990's is creati bs and veggies as crops fail in the

Aeroponics systems using oxygen, mist and LED light are filling abandoned big box stores, shuttered when drone delivery for internet commerce became commonplace.

Some aeroponics systems use 95% ass water than traditional farming, so acy are not overtaxing city water

perations bill to provide land grant ges with funds to establish rula to transition traditional

Flood Insurance No Longer Available

in order to avoid bashrapte, the US National Flood Insurance Program (NFIP) has stopped insuring all homes in coastal high hazerd areas. Special flood hazerd areas include areas subject to high velocity wave action. Property that was in Zone V, previously called the coastal high hazerd area on Flood Insurance Bate Man (Flood Ins Flood Insurance Rate Maps (FIRMs), will no longer be covered. The US has been unable to meet the claims filed on repeat flood properties. New NFIP maps will be coming out in the Spring.

Climate Migration Moves the World! From 2000 to 2020, more than 1,000 people a day moved to Florida, USA. Now, in 2050,

1,000 people a day are moving to higher ground in nearby states. Home prices in Florida are plummeting, and growing by double digits in their destination.

double digits in their destination.

Regenerative communities are thriving in those states by including local farming and farm markets, solar powered homes and farms, and developing intermet-based job hubs offering pools of employees. But this is not just a Florida phenomenon. In the South Pacific, the Kiribati purchase of last local buildings and the south Pacific, the Kiribati purchase of the local buildings and the south Pacific, the Kiribati purchase of

in the South Pacific, the Kinthan purchase of land in the Philippines 30 years ago is proving to be a wise investment, providing destinations for refugees fleeing their ever-shrinking homeland. In low-lying areas of Mumbui, entrepreneurial fishermen are preferring to stay

put, building their homes on stilts, suspending home-made aquaculture farms in the waters below to feed their families and to trade with

Tabletop Simulation: Solve simulated real-life challenges with friends and neighbors. Share your solutions with a response panel of decision-makers.
