Census tracts that are overburdened and underserved are highlighted as being disadvantaged on the map. Federally Recognized Tribes, including Alaska Native Villages, are also considered disadvantaged communities.

Zooming in and selecting shows information about each census tract.

Get the data

Download the data with documentation and shapefile from the [downloads](#) page.

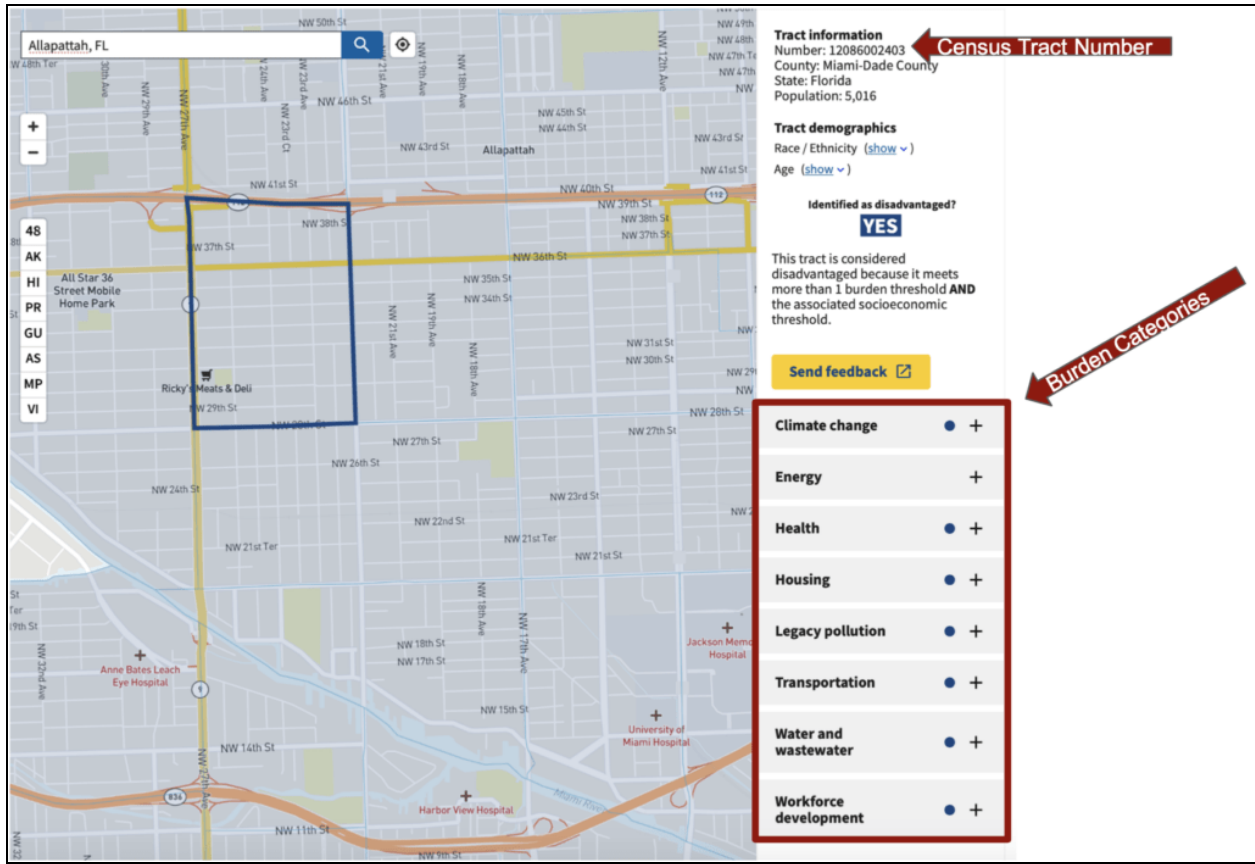

How to use the map:

- Zoom in +, search 🔍, or locate yourself 📍 and select to see information about any census tract.

Things to know:

- The tool uses census tracts. Census tracts are a small unit of geography. They generally have populations of between 1,200 - 8,000 people.
- Communities that are disadvantaged live in tracts that experience burdens. These tracts are highlighted on the map.
- The tool ranks most of the burdens using percentiles. Percentiles show how much burden each tract experiences when compared to other tracts.
- Thresholds, or cutoffs, are used to determine if communities in a tract are disadvantaged. Certain burdens use percentages or a simple yes/no.
- Land within the boundaries of Federally Recognized Tribes and point locations for Alaska Native Villages are highlighted on the map. These communities are also considered disadvantaged.

Click on the map to (1.) The census tract number appears in the right hand column and (2) The categories appear to the right below (Climate, Energy, Health, Housing, Legacy Pollution, Transportation, Water and Wastewater, Workforce Development).

Construct a chart of the burden categories met by each census tract. If the census tract has met the burden, there will be a blue dot by the burden category.

The Community's Justice40 Profile Chart:

Chart of Census Tracts in Allapattah that meet the threshold burden to be Justice40 Census Tracts, and the categories for which the threshold burdens were reached in the tract. An *asterisk indicates a partial census tract in the geography, but the information for the entire census tract is provided here. (Source: EPA EJSCREEN accessed 3.29.2023)
